New Hampshire Health Care Association presents

NIPPing Infections in the Bud
Specialized Training in Infection Prevention and Control

Infection Prevention and Control has taken center stage as part of the Centers for Medicare and Medicaid Service’s Reform of Requirements for Long-Term Care Facilities. The NHHCA is partnering with RB Health Partners, Inc. to offer a specialized training that will equip long term care facilities with the tools they need to participate in surveillance; learn and use infection control and containment practices; and adopt a proactive approach to preventing spread while being good stewards of antibiotics to preserve effectiveness of the agents available today.

This specialized training delivers all the components of a compliant Infection Prevention and Control Program.

Wednesday & Thursday
July 26-27, 2017
NHHCA Offices; 5 Sheep Davis Road, Suite E; Pembroke, NH 03275
New Hampshire Health Care Association presents

NIPPing Infections in the Bud
Specialized Training in Infection Prevention and Control

This specialized training delivers all the components of a compliant Infection Prevention and Control Program.

This program is for individuals who have primary professional training in nursing, medical technology, microbiology, epidemiology or other related field who will be responsible for the facility’s Infection Prevention and Control Program (IPCP).

The specialized training will drill deeper with standard and transmission-based precautions, including the circumstances in which isolation should be used for residents or staff. The Infection Preventionist’s role will be fully explored, with a review of that specialist’s qualifications and scope of practice.

In addition to receiving CEUs, training participants will have the opportunity to take a post-training examination as evidence of having successfully completed the coursework in infection prevention and control.

Attendees will:

- Learn how to develop systems for preventing, identifying, reporting, investigating, and controlling infections and communicable diseases across a broader range of nursing facility residents, guests, and staff.
- Identify standards, policies and procedures that are mandated to support the systems, with expert guidance on surveillance and reporting.
- Understand new staff training requirements and how to implement a compliant antibiotic stewardship program that includes antibiotic use protocols and systems for monitoring antibiotic use and recording incidents.
- Learn how to connect the new Facility Assessment with the development of an IPCP.

* Participants must bring their own personal protective equipment (PPE), which includes gowns, gloves, and disposable masks.

**Program will be held at the**

NHHCA Office
5 Sheep Davis Road, Suite E; Pembroke, NH 03275
NHHCA Member: $300.00
Non-Member: $400.00
